EDUCATION

York University **Toronto, ON**
Bachelor of Commerce (BCom) Honours, Supply Chain Management *Expected May 2028*
Relevant coursework: Supply Chain Management, Operations Management, Physical Distribution & Transportation, Management Science, Business Statistics, Management Information Systems

Yonsei University **Seoul, South Korea**
International Summer School: Operations, Entrepreneurship & Machine Learning *Jun 2026 – Aug 2026*

EXPERIENCE

SEED Toronto **Toronto, ON**
Founder & President *Sep 2026 – Present*

- Launched seedtoronto.org with AI coding tools (Claude Code, Codex, Lovable) on Next.js, Neon Postgres and Vercel, bringing official benefits from 208 colleges and universities across Canada and 125 government programs into one hub; 13 school-email-verified members as of Nov 2026.
- Defined and implemented the site's security controls: school-email-only sign-up, salted password hashing (PBKDF2, 600,000 iterations), 12-hour secure sessions, single-use verification codes and rate limits on 15 user actions.
- Published a PIPEDA- and CASL-aligned privacy policy with a data retention schedule, least-privilege admin access with quarterly reviews and an incident response plan, and automated a daily check that emails me when any official source link breaks or changes.
- Lead a 5-person leadership team and wrote 37 governance and finance documents with segregation of duties, including tiered spending approvals and Head of Finance sign-off on all founder expenses.

SOBOK Bakery **Toronto, ON**
Founder & Operations Lead *Apr 2026 – Present*

- Cut admin time per monthly pre-order round from an estimated 3 hours to 30 minutes by consolidating 3 ledgers into one Google Sheets workbook, where each order appears as it is submitted and costs, inventory, production totals and monthly settlement calculate automatically.
- Set up a Korean and English pre-order form with Google Apps Script that requires allergen and terms consent and instantly emails each customer an order confirmation with e-Transfer payment instructions.
- Sold 18 financier sets across 12 orders from 11 customers (1 repeat) in 2 pre-order rounds, using 9 products developed with Korean ingredients.
- Built a unit cost model showing a 71% cash margin ($14.25 on a $20 set) but only ~$3 after valuing labour at $18/hour, making production volume, not price, the main profit lever; keep a regulatory checklist and postponed the next sale until licensing and insurance are complete.

Coupang **Seoul, South Korea**
Fulfillment & Logistics Operations Support *Jul 2025 – Aug 2025*

- Sorted, tracked and routed inventory across multiple SKU categories in a high-volume e-commerce fulfillment centre using scanning and WMS workflows under time-sensitive dispatch deadlines, while maintaining inventory accuracy and safety compliance.

Korean Student Association at York University (KSAY) **Toronto, ON**
Event Planning Team Lead *Sep 2025 – Jan 2026*
Event Planning Team Member *Sep 2024 – Aug 2025*

- Promoted to event planning team lead after one year and owned end-to-end planning for every event, from finances and budgets to KPI tracking and delegating tasks to executives; ran 4 events from Sep to Dec 2025, each with 40+ attendees and all profitable, closing the term with a $1,000 surplus. The year-end event drew 60+ attendees and $2,000 in revenue; for context, the team's first event in Sep 2024 (a different format) drew ~30 attendees and $100.
- Coordinated cross-functional requests and dependencies with 17 people over the term (2 co-presidents, 3 department leads, 9 executives and 3 team members), and allocated budgets, timelines and tasks across the team.

PROJECTS

Machine Learning-Based Delivery Delay Risk Prediction **Aug 2026**

- For a Yonsei Machine Learning course project, built a Python classification workflow on 180,519 supply chain order records to predict late deliveries: cleaned and prepared the data, compared Logistic Regression, Decision Tree and Random Forest models, prevented leakage with a train/test split grouped by order, and tuned a Decision Tree to 64.3% recall and 0.696 F1.

Salesforce CRM Configuration (Guided Course Project, ADMS 2511) **Jan 2026 – Apr 2026**

- Configured a Salesforce CRM prototype for investor-pitch management with custom objects, validation rules, reports, dashboards, automated lead assignment and email notifications.

SKILLS & CERTIFICATIONS

Technical: Python (pandas), SQL / PostgreSQL, Google Apps Script, Excel (pivot tables, VLOOKUP) / Google Sheets, Salesforce CRM, Power BI (in progress)

Security & Risk: Access control, data privacy (PIPEDA, CASL), incident response planning, segregation of duties, regulatory compliance

Operations: Inventory management, WMS, cost analysis, process improvement, project and event planning

AI Tools: Claude Code, Codex, Lovable

Certifications: CompTIA Security+ (In Progress, exam Jan 2027); ASCM Supply Chain Technology Certificate (In Progress); ASCM Professional Member

Languages: Korean (Native), English (Professional Working Proficiency)
